

# Arrays

Here is an array of chairs.

**Math Words**

- array
- dimension
- factor

There are 2 rows of chairs.  
 There are 7 chairs in each row.  
 There are 14 chairs in all.

$$2 \times 7 = 14$$

The arrangement of chairs can be represented as a rectangular array.  
 The dimensions of this array are  $2 \times 7$ .  
 Say this as "2 by 7."

These arrays represent all of the ways to arrange 14 chairs.

- Dimensions:
- 1 by 14
  - 2 by 7
  - 7 by 2
  - 14 by 1

The numbers 1, 2, 7, and 14 are factors of 14.

**Find all the arrays for 16.**
