

Working with Data

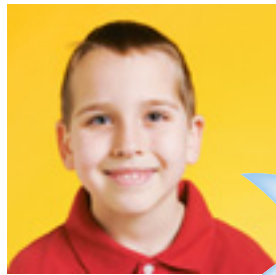

Math Words

- data

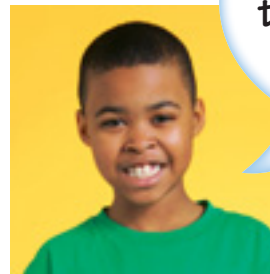

Data are pieces of information. You can collect data by counting something, measuring something, or doing experiments.

People collect data to find out about the world around them.

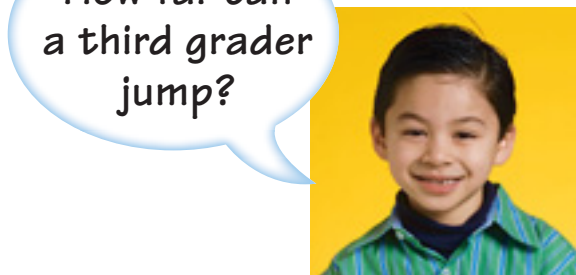

By collecting, representing, and analyzing data, you can answer questions such as these:

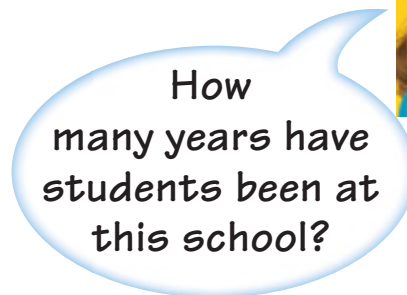

Do third graders and fifth graders have the same favorite mealtime?

What games do third graders like to play?

How far can a third grader jump?

How many years have students been at this school?

Working with data is a process.
